## **Accsense is the wireless temperature monitoring solution for medical & laboratory refrigeration**

**Up and running in 5 minutes**

**SANTA BARBARA, Calif., Aug. 8, 2007** – Accsense Fast and Easy Wireless Monitoring system allows medical, pharmaceutical and laboratory applications complete peace of mind. Ideal for all refrigerators, freezers and incubators, it's a simple solution for keeping temperatures, CO<sub>2</sub> levels, humidity, and any other measurements in check with constant monitoring. Receive alarm notifications via email, phone or pager if problems arise—anywhere, anytime.

Accsense's out-of-the-box solution is up and running in five minutes, allowing users to start recording data and receiving information immediately through web-based software. Comply with JCAHO, FDA, AABB and other industry regulations quickly and easily. Print out reports for JCAHO and other industry compliance and prove that your samples are under constant control. Accsense is always watching, so you don't have to.

(more)

A complete Accsense wireless system automatically forms a secure, self-healing wireless mesh network. Accsense sensor Pods are compatible with a range of standard external plug-in sensors and probes, including thermocouples, resistance-temperature detectors, and thermistors.

**About Accsense, Inc.**

Accsense is dedicated to providing easy-to-use tools and services that streamline commercial processes and operations management. By leveraging the convenience offered by wireless and Internet technologies, Accsense Solutions are user-friendly and quick to deploy. Through the secure, hosted software service, managers, engineers and non-technical staff can have ready online access to their data. Accsense is empowering businesses with the ability to collect data, monitor conditions and watch for equipment failure around the clock, and from anywhere in the world.
